Fail-safe inductive sensors

## A complete range of sensors for position detection

- Certification to EN 60947-5-3 for electromechanical control gear
- Ensuring operator and machine safety
- No special actuator for electronic fail-safe sensors required
- Connection to safety interface, safety controller or safety PLC (i.e. AD SR1, Mosaic)

## APPLICATIONS

- Door or flaps detection at closed position
- Cylinder shaft detection
- Treads up detection
- Bolster detection at a truck crane
- Robot cell working limitation of the working area
- Door detection
- Wind turbine lock / endpostion of the blade

## / overview

The operating principle and thus the advantages of inductive sensors can be used for safety applications.

Inductive safety applications are special applications which require a non-contact and safe detection of a metal object.
A wear-free function due to the non-contact principle together with a high protection rating, guarantee a high uptime of machines and installations.
The PI-Safe sensor increases the uptime and safety of installations and can be connected to approved evaluation units without cross-fault monitoring.

Faults such as coil break or coil short circuit are diagnosed and the sensor passes into the defined safe state. Even a cross fault between the supply voltage and one of the two outputs does not affect the safety function of the sensor.

Applications include reliable positioning on rotary indexing tables and machine tools, safe triggering of slow travel or switching off in end positions for presses, gantry robots and actuators or safe area monitoring for robots.

## MAGNUS RFID

The best in cost-effectiveness

- Wear-free technology allows for longer life time
- Status LED and diagnostic output
- Smallest design of RFID safety sensors
- Full mechanical compatibility with Magnus MG S and MG B
- Can be used as a stand-alone

## The best in safety

- Tampering protection in accordance with DIN EN 14119, the highest in its class
- Screw covers prevent easy removal
- Series connection up to PL e / SIL 3

## The best in versatility

- Dual mounting options
- M12 connector or cable
- IP67 and IP6K9K protection grade for use in harsh environments
- Complies with the strict hygiene and cleaning requirements of the food and packaging industry
- 3 different coding levels
- Extension cables for series connection

Operating temperature:
$-25 \ldots+70^{\circ} \mathrm{C}$

High protection classes IP67 and IP6K9K for use in harsh environments

Resistant to aggressive media, e.g. cleaning agents used in the food industry

Vibration resistance:
$10 \ldots 55 \mathrm{~Hz}$, amplitude 1 mm

## overview

The application of Magnus RFID sensors can be extremely wide thanks to the compact and versatile design.

The different design and technology options and the complete mechanical compatibility with Magnus MG series make this product extremely valuable for users.

The RFID technology enables Magnus RFID sensors to be individually coded in three different ways to allow the appropriate tampering protection in all applications. The highest configurations allow each sensor to be paired with one only assigned actuator.

The RFID technology used allows to reach safety levels up to PL e / SIL 3 also when connecting the sensors in series.

As a result, Magnus RFID sensors can be simply integrated in existing safety scenarios, offering a cost-effective solution for modifying and upgrading machines.

## Multiple options of actuation technology

- Individual coding

The actuator is programmed via teach-in and permanently assigned to the sensor during set-up (the process can be repeated if necessary)

- Unique coding

The actuator is permanently assigned to the sensor during manufacturing (it cannot be replaced with another actuator)

- Actuator coded

The actuator is free and not specifically assigned to the sensor (one actuator can work with multiple sensors)

## Ideal also in the most demanding applications

Unique mechanical characteristics allow protection againts cleaning agents and washdown processes, a typical requirement of the food industry.

Ilion is a Type 2 safety photocell with M18 cylindrical metal body.

The photocells must be connected to control unit for esample: AU SX or AU SXM control unit with Muting to form a protection system that can be composed of $1,2,3$ or 4 single beam photocells or Mosaic.

In case of connection with Mosaic safety controller, the number of photocells depends to the configuration of the Mosaic system (for details on the interface see AU SX, AU SXM and Mosaic control units).

The compact size of the photocells makes it possible to fit the protection system into very small spaces, while the possibility to use more photocells provides the maximum flexibility in positioning the protective beams.

All connections through M12 5-pole connectors. Unshielded cables up to 50 meter long (between sensor and control unit).

Operating temperature: $0 \ldots+55^{\circ} \mathrm{C}$

IP67 protection rating

TECHNICAL FEATURES

Ilion photocell includes multi-language instruction manual and CE declaration of conformity.

Ulisse is a Type 2 safety photocell with metal body and M8 3-pole connector.

The photocells must be connected to control unit for esample: standard AU SX or AU SXM control unit with Muting or Mosaic to form a protection system that can be composed of $1,2,3$ or 4 single beam photocells.

In case of connection with Mosaic safety controller, the number of photocells depends to the configuration of the Mosaic system (for details on the interface see AU SX, AU SXM and Mosaic control units).

Thanks to the very small size, the anodised aluminium case and the glass lenses free from electrostatic dust attraction, Ulisse is the ideal solution for the protection of weaving machines as well as of other applications characterised by high levels of mechanical stress or very restricted spaces.

Safety Sin/Cos incremental encoder. Together with Mosaic, it forms a SIL 3 certified safety function for speed monitoring. Available in two models: Shaft or Hollow shaft.

## APPLICATION EXAMPLE

Any applications requiring speed monitoring of a rotating axis.

Features a robust and reliable interface and the ability to handle high mechanical loads.

## SAFELOCK

Safelock is a safety switch utilised for the protection of personnel when opening doors leading to dangerous areas. It acts by monitoring and interrupting the safety circuit during dangerous scenarios.

The solenoid locks and unlocks access to the dangerous area, guaranteeing safety until the danger has stopped. Available models

## SLK-M

Retention mechanism actuated by a spring and unlocked by ON current. Guard locking by spring force, release by applying voltage to the guard locking solenoid.

## SLK-E

Retention mechanism actuated by ON current and unlocked by spring. Guard locking by applying voltage to the guard locking solenoid, release by spring force.

- Actuating head made of plastic or metal
- Auxiliary release on the front. Used for releasing the guard locking with the aid of a tool. To protect against tampering, the auxiliary release is sealed with sealing lacquer
- Approach direction: horizontal and vertical. Can be adjusted in $90^{\circ}$ steps
- Any installation position

Operating temperature: $-20 \ldots+55^{\circ} \mathrm{C}$

## Your future's safe!

More than 60 years of quality and innovation
Founded in Turin (Italy) in 1959, ReeR distinguished itself for its strong commitment to innovation and technology.

A steady growth throughout the years allowed ReeR to become a point of reference in the safety automation industry at a worldwide level.

The Safety Division is in fact today a world leader in the development and manufacturing of safety optoelectronic sensors and controllers.

ReeR is ISO 9001, ISO 14001 and ISO 45001 certified.
